

The spread of coronavirus (COVID-19) is on all our minds and in the news. We would like to reassure you Geodrill is committed to ensuring the health and safety of our people, clients, stakeholders and the communities we live and work in as COVID-19 escalates its impact on businesses, families and communities across the globe. In addition to taking prudent steps to ensure a safe environment for our employees and customers, we have implemented steps to prepare and respond to this threat in order to minimize disruption to our services.

Geodrill has established an executive COVID-19 response team which is closely monitoring the situation. The team is meeting daily to ensure proper preparedness and make timely decisions in response to the developing situation.

Service Levels

At this time, our sites are not impacted by the outbreak and service levels remain unaffected. However, we are not complacent to the threat and have ramped up preparations at all locations. We are asking that customers/employees be aware of the following restrictions at our sites. These have been implemented for the benefit of all customers and staff:

- Anyone who has travelled to areas affected by COVID-19 within the previous 14 days should not visit the company facilities or job sites. The situation dashboard provided by the World Health Organization provides up-to-date information on the outbreak: <https://experience.arcgis.com/experience/685d0ace521648f8a5beeeee1b9125cd>
- Anyone who may have been exposed to the COVID-19 virus via a family member, colleague or other contact should not visit the company facilities or job sites unless they have undergone a period of self-isolation and remained clear of infection of the COVID-19 for 14 days.
- Anyone suffering symptoms of COVID-19 should not visit the company facilities or job sites until they have undergone a period of self-isolation and have since remained clear of infection of the COVID-19 for 14 days.

With the above in mind, we ask that customers be proactive in discussing their requirements so that we can support them in securing the necessary equipment and help them manage the potential impact.

The Geodrill Team
